THESIS

Master's thesis, *Frame-wise Representations of Depth Videos for Action Recognition*. We investigate the of problem continuous action recognition from depth images. Three types of depth frame data representation are proposed. Further, we investigate the frame-wise classification as a solution for the continuous action detection problem.

Bachelor's thesis *Categorising the Abnormal Behaviour from an Indoor Overhead Camera*. We propose an approach of using an overhead camera to detect the anomalous events based on the trajectories of moving objects with and EER (Equal Error rate) of only 1.2%. I contributed 65000 trajectories to *Edinburgh Informatics Forum Pedestrian Database*.
